4 inputs determine the right sensing & feedback.

A distributor-facing pre-quote checklist. If the customer answers most of these at the first call, the second call is the quote.

01 **What are the cut-in and cut-out pressures?**
The pressure band determines the replacement switch range.

02 **What voltage and motor amps does it switch?**
Electrical rating must be safe for the circuit.

03 **Does the switch include an unloader valve or lever?**
Compressor pressure switches often fail by missing the physical options on the old unit.

04 **What thread and port count are on the old switch?**
Port layout controls fit on the compressor manifold or tank.
